

New VIP Deep-Analysis Arbitrage Software “DAAS”

The new DAAS software allows the trader to use different arbitrage strategies between different types of accounts, protocols, and platforms.

It is possible to use DAAS for determination of an arbitrage situation, for instance, on single platforms vs fast feed as DAAS for determination arbitrage situation between platforms/ accounts. Each account can be involved in one combination for arbitrage determination as well as in several combinations.

2. Tokyo;
3. London.

The benefits

1. The ability to find arbitrage situations between different platforms. For example, between cTrader and MT5 or MT4 and FIX API.
2. The ability to lock an arbitrage order on a platform different from the one on which the order was opened. For example, arbitrage situation appeared on MT4 platform vs fast feed, software can open lock position on MT5. It creates opportunity to use MT4 and MT5 account on the same broker for lock strategies.
3. The ability to use different arbitrage strategies on the same accounts.

- 4. The ability to lock an order by different instrument.
- 5. Ability to use any connector as fast feed with trading on it. For example you can use LMAX FIX API account for your own source of fast feed and trade on the same account as well.

Setup example

On this stage we will offer you to make a pre-payment (setup fee), and you will be able to receive a 50% discount for any strategy when software will be ready to use.
